

**AMENDMENTS TO THE SPECIFICATION**

Please amend the specification on page 31 as follows, deleting lines 3-31 of page 31 of the specification:

a medium which fixedly carries a program or data (e.g., a medium, such as the above-described disk or card or the like, a semiconductor memory, etc.)~~as well as a communication medium, which is used to transfer a program or data on a communication network, and unfixedly carries a program or data. For example, when the character display apparatus 1A comprises a means for connecting to a communication line, such as the Internet, the character display program 7a and the data 7b can be downloaded via the communication line. In this case, a loader program required for download may be previously stored in a ROM (not shown) or may be installed from the auxiliary storage apparatus 7 to the control section 3.~~

Next, each item of the data 7b stored in the auxiliary storage apparatus 7 will be described. The data 7b contains the skeleton data 71b which defines the skeletal shape of a character, and the Y direction correction table 72b and the X direction correction table 73b.
